

CTE1000

CELLULAR TELEPHONE ENTRY

As with all CelAccess 100% cellular products, the CTE1000 is the only one of its kind. Not only is it unique, it is the easiest telephone entry system of any make or model to install. Regardless of location or terrain, if cellular coverage is available, the CTE1000 is ready to operate right out of the box.

EASY INSTALLATION

This simple turnkey cellular system eliminates the line-of-site requirements and distance limitations of other wireless systems as well as the need for phone lines and extensive trenching of traditional telephone or intercom systems.

SOPHISTICATED AND FLEXIBLE

The CTE1000 is configurable for single or multi-family installations. All calls initiated by the CTE1000 are first routed through the CelAccess automated control center. Once the call is received, the system can then call up to 3 unique numbers

simultaneously ensuring a greater connection rate and customer freedom. Once the call is connected to the property owner, a simple press of the "*" key allows a visitor entrance.

All CTE 1000 activity is reported in real time

Product Information

FEATURES

- Easy to use web interface for setting up phone numbers
- Full duplex telephone communications and openings via touch tone telephone
- 500 code capacity
- Uses 12 VDC or 12 VAC and is solar friendly
- Operating temperature range -15 to 158F
- Current draw (12 VDC): 77mA standby 680mA operating
